

Parent Workshop

USING ASSISTIVE TECHNOLOGY WITH YOUR CHILD AT HOME

For Parents of Children with Learning Disabilities

Assistive technology can help students with learning disabilities to improve their reading and writing. It can also be useful for organizing and for studying.

This workshop is designed to give parents some hands on experience with assistive technology. In addition, we will inform parents about some of the technology that exists today that can help their children to not only become independent learners but also to succeed in their educational endeavors.

Workshop Topics:

- What should your child be aware of?
- What do they say about themselves?
- What can parents do to help?
- What technology would help your child?
- What should you buy / what should you try?
- Where can you get more help?
